Reaction or event ?

Event

Serious?

No

What should you do as TE?

check cultures/ inform  
txp center/inform CA/TRIP  
voluntary

What should Hospital do?

Monitor patient/ collaborate in  
investigation TE

# Tendon tears

**NL patient** : Achillis tendon tears during OP pre-implantation.

**Donor + processor US** : aseptic processing; gammaradiation. Second tendon in same period from same processor ( different donor) in NL. Two more tears in other countries same processor

Reaction or event ?

Serious?

What would you do as hospital?

What would you do as TE?

# Tendon tears

**NL patient** : Achillis tendon tears during OP pre-implantation.

**Donor + processor US** : aseptic processing; gamma radiation. Second tendon in same period from same processor ( different donor) in NL. Two more tears in other countries same processor

Reaction or event ?

Event/Reaction

Serious?

Yes

What would you do as hospital?

Save tendon for investigation/ report to NL distributor

What would you do as TE?

Report to TE in the US, investigate /Report to NL

# Heart valve rupture

**NL patient** : patient with endocarditis and sepsis dies during OP due to bleeding around the stitches of human aortic valve. Surgeon considered aortic wall "weak" and damaged.

**Donor + processor DE:** No morphological deficiencies found

Reaction or event ?

Serious?

What would you do as to hospital?

What would you do as TE?
